Ok, will do. If it's alright, I'd like to share this bulleted form with Amy and Nelson so they can see what direction I'm going.

Thanks Phil!

I apologize that I wasn't clear about this 😊 – we need a 1-page memo to explain why this new use will not impact the NMC CRA that will likely be included in the docket with the aldicarb assessment (subject to RD input). Can you work on incorporating these bullets into a few paragraphs?

Thanks,
Don

Dana and Don,

Please find attached a one-pager (front and back 😊) that characterizes the impact of aldicarb use on citrus in the 2007 NMC CRA. It also characterizes the impact of adding the highest years of PDP data on orange, orange juices, and grapefruit to the toxicity-adjusted dietary Report on the Environment (ROE) indicator. Exposure at the 99.9th percentile for children 1-2 years old was minimal. We also include some comparison of the tox endpoint and safety/uncertainty factors between the CRA and single-chemical assessment and mention the sensitivity of ½ LOD exposure estimates based on the historically high PCT values and low single-chemical endpoint. Finally, attached is also an article from Scientific American in 2010 about the aldicarb cancellation. We thought it would be good for the front office to be aware of any political blowback that might result from any regulatory decisions for aldicarb. I'll wait for your go ahead to share with EFED. Let me know if you have any questions. I'm happy to walk you through it.

Phil

Yes, will do. For characterization it would be helpful to know what the tox endpoint and safety factors are for the single chemical. @Mike is this something your branch has handy?

It looks like EFED is ready to go on this now!

Phil – Do you want to reach out to Amy and start whipping up the CRA 1-pager?
